

INTELLIGENCE FOR THE PHYSICAL WORLD

Hercules / Marinas

Berth-fit scenarios, marina context and shore-power comparisons translate asset intelligence into ports. Production port bookings, accepted customer deployments and measured emissions outcomes require further evidence.

PUBLIC EVIDENCE BRIEF / AS OF 2026-10-13

Problem

Marinas need clearer berth, asset and infrastructure decisions.

Product

Marina context, berth-fit scenarios, shore-power comparisons and evidence exports.

Live state

Working demonstration; production bookings and live port integration not established.

Customer evidence

Existing proposals and public demos are pipeline/product evidence, not signed customers.

PRODUCT / EXPANSION / EVIDENCE

The path to scale.

Data moat

Authorized port geometry, asset context and reviewed operational history; actual integrations require agreement.

AI role

Explain fit and infrastructure scenarios; operators retain booking and safety authority.

Commercial model

Proposed marina/enterprise licences and integration work.

Expansion path

Validate port data, sign pilot scope and demonstrate operator acceptance.

Demo and investor discussion
