

INTELLIGENCE FOR THE PHYSICAL WORLD

Maritime

Voyage context, AIS histories, jurisdiction-aware workflows and reviewed reporting are the operating foundation. Specialist fiscal or regulatory conclusions remain with qualified reviewers.

PUBLIC EVIDENCE BRIEF / AS OF 2026-10-13

Problem

Vessel, voyage and jurisdiction evidence is fragmented across operators and documents.

Product

AIS/voyage context, compliance evidence, specialist reports and RALE scenario tools.

Live state

Operating delivery evidenced in September; current availability requires the product's own checks.

Customer evidence

Three anonymized weekly report deliveries are documented. SMTP acceptance is service evidence, not paid-revenue or customer-count proof.

PRODUCT / EXPANSION / EVIDENCE

The path to scale.

Data moat

Source-linked voyage history, vessel baselines and reviewed evidence workflows; licensing and coverage remain diligence items.

AI role

Explain context, detect signals and assemble evidence; qualified reviewers approve regulated conclusions.

Commercial model

Specialist subscriptions, paid integration and evidence services; actual mix undisclosed.

Expansion path

Renew recurring workflows, validate data rights and repeat onboarding before wider fleet scale.

Demo and investor discussion
