

INTELLIGENCE FOR THE PHYSICAL WORLD

NewWorld

The public product reports PhoenixAI NewWorld v0.0.47. Dated capability endpoints report text, reasoning, code, research, documents, memory, vision and voice available. Image generation, image editing and autonomous execution report not configured. Availability metadata is not a repeat of every functional test.

PUBLIC EVIDENCE BRIEF / AS OF 2026-10-13

Problem

People need private, portable intelligence without confusing identity, entitlement and contribution.

Product

Account-scoped chat, research, documents, memory and voice; optional contribution follows its separate contracts.

Live state

Public v0.0.47 metadata observed; checkout READY. Image generation and autonomous execution not configured in the current capability response.

Customer evidence

Product and capability evidence are public. Paid receipts, conversion and recurring totals were not reconciled.

PRODUCT / EXPANSION / EVIDENCE

The path to scale.

Data moat

Private owner-scoped memory and workflow evidence are product context, not a claim of rights over users' data.

AI role

Route configured models/tools within owner-scoped access and named evaluation approvals.

Commercial model

Observed Personal catalog USD 149/year or USD 14.90/month. Offers are separate from payment evidence.

Expansion path

Validate billing outcomes, activation and retention, and measure useful contribution with actual accepted jobs.

Demo and investor discussion
