

INTELLIGENCE FOR THE PHYSICAL WORLD

Continuity Protocol / Digital Testament

Public protocol framework. This is not an executed legal testament, board resolution, beneficiary record or credential recovery kit.

PUBLIC EVIDENCE BRIEF / AS OF 2026-10-13

CONTINUITY / GOVERNANCE / RECOVERY

Built beyond one person.

Authority must be earned

Verified identity + fresh passkey/hardware key + separate recovery factor + independent governance evidence + required quorum = exact-scope temporary capability. A claimant URL or recovery code alone grants no operational access.

People entrusted. Powers bounded.

Family continuity role: family continuity guardian (proposed not enrolled); Personal continuity role: personal continuity guardian (proposed not enrolled); Business continuity role: business continuity partner (proposed not enrolled); Independent professional role: trustee or solicitor (unassigned)

Independent approval

Routine: 2 independent approvals with 3 active participants. Critical: 3 independent approvals with 5 active participants. Requester excluded. Proposed names do not constitute enrolled participants; additional independent capacity is required for critical quorum.

Founder heartbeat

Optional monitoring issues alerts only. Elapsed time never transfers authority. Legal corporate succession is a separate legal process. No token vote substitutes for corporate/legal authority.

MARK Continuity Mode

Only role-permitted customers, contracts, invoices, obligations, infrastructure, incidents, deployments, backups, domains, mailboxes, repositories, contacts and commercial context are exposed. Missing source evidence stays marked missing.

RECOVERY / EVIDENCE / SECURITY

Test the claim.

Latest drill: 2026-10-13. Eight isolated sandbox/simulation checks; no production authority changed.

Founder unavailable simulation: PASSED / simulation

Guardian verification: PASSED / simulation

Quorum simulation: PASSED / isolated execution

MARK continuity startup: PASSED / isolated execution

Read-only customer continuity: PASSED / isolated execution

Backup recovery test: PASSED / isolated execution

CI/CD continuity: PASSED / simulation

Credential rotation exercise: PASSED / isolated execution

Receipt SHA-256: 79548545803457ad20be02649568c4558ad9aa07374e78913a42982f642c0345

Production recovery limits

AIS/Elasticsearch and off-host restore are not independently verified. Production RPO/RTO are unknown. Independent audit is not completed. Real guardian enrollment and witnessed production continuity validation remain outstanding.

Hash commitments, private content off-chain

Policy manifests, configuration versions, drill receipts, signer-set commitments, board-resolution hashes, release manifests and backup evidence may be anchored through the existing PhoenixAI service. No continuity-specific anchor is called verified until receipt, finality and commitment checks pass.

Evidence and provenance

Finalized Base registry activity snapshot | 2026-10-13 | Pinned code and finalized block independently checked
<https://basescan.org/address/0x9bB168713f5CF5d53320F70930CD9c0EF3252273>

Continuity operability and recovery evidence | 2026-10-13 | Local validated control plane; sandbox drill; production recovery not proved

PHX service-credit and protocol implementation | 2026-10-13 | Local implementation; new contracts unaudited and undeployed
